

TD Dialogues

Should anticholinergics be reconsidered in older patients with tardive dyskinesia (TD)?

Listen to this **new podcast** to learn why anticholinergic medications are inappropriate for the treatment of older adults with TD, a drug-induced movement disorder, and to explore evidence-based treatment strategies that may better support these patients.

Rethinking the Use of Anticholinergics in Older Adults Diagnosed With Tardive Dyskinesia

Presented by

Rob Leffler, BCGP, FASCP

Vice President of Clinical Services, Synchrony Pharmacy

"Education around TD identification and treatment has grown over the past decade, and there's been a breakthrough in recent years in available medication options."

— Dr. Rob Leffler

Jennifer Mondillo, PhD, MBA, MSN, ANP-BC

Clinical Associate Professor & Adult-Gerontology
Nurse Practitioner Track Coordinator, Villanova University

"Taking a critical look at anticholinergic burden can help optimize care and protect our older patients with TD."

— Dr. Jennifer Mondillo
